                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Current sequence finishing criteria for the C. elegans genome current sequenced unambiguously consortium are that all bases are either sequenced unambiguously on both strands, or on a single strand with both a dye primer and dye terminator reaction, from distinct subclones. Exceptions are indicated by an explicit note.

EXCEPTIONS SECURITY THIS SEQUENCE IS NOT NECESSAILY THE ENTIRE INSERT OF CLONE C13B4. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions.

The true left end of clone C13B4 is at 1 in this sequence. The true right end of clone C13B4 is at 9858 in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The true left end of clone C05D12 is at 30012 in this sequence. The true right end of clone B0491 is at 4602 in this sequence. Coding sequences below are predicted from computer analysis, using the program Genefinder (P. Green, ms in preparation), and other

```
/note="Organ: missing of the property of plasmid DNA from three normalized libraries (melanocyte 2NbHw, pregnant uterus NbHPU, and fetal heart NbHH19W) were mixed, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 260232-265223, 340488-345479, and 484488-489479."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /clone_lib="Scares NhHMPu S1"

(Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Eco RI; Equal amounts of plasmid DNA from three normalized libraries (melanocyte 2NbHM, pregnant uterus NbHFU, and fetal heart NbHH19W) were mixed, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 260232-265223, 340488-345479, and 484488-489479."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SIS sequence; primer; sequence tagged site. human Plasmid clones, generated from a lymphoblastoid cell line throm a human male. Localized to human chromosome 12 by analysis on the NIGMS Human/Rodent Somatic Cell Hybrid Panel #1, Coriell Institue for Medical Research, Camden, NJ 08103.

```

Statistics: Mean 11.043; Variance 1.850; scale 5.968

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

human clone=253126 primer=M13RP1 library=Morton Fetal Cochlea vector=pBluescript SR - host=SOLR cells (kanamycin resistant) Rsitel=EcoRI Rsite2=XNoI The cDNA was oligo (dT) primed with an XhoI restriction enzyme recognition site and an 18 base poly dT sequence. For the 5' end, the synthesized cDNA termini were treated with T4 DNA polymerase and EcoRI adaptors were ligated to the blunt ends. adaptor linker: GAATTCGGCACGAG.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Deuterostomia; Chordata; Vertebrata; Gnathostomata; Osteichthyes; Sarcopteraydi; Chornata; Tetrapoda; Anniota; Mammalia; Theria; Eutheria; Archonta; Primates; Catarrhini; Hominidae; Homo.

Genes galore: a summary of methods for accessing results from large-scale partial sequencing of anonymous Arabidopsis cDNA clones plant Physiol. 106, 1241-1255 (1994)
Lambda PRL2 is a cDNA library derived from equal quantities of 4 pools of mRNA. The mRNA sources were 1) 7 day germinated etholated seedlings; 2) tissue culture grown roots; 3) staged plants half with 24 hour light cycle, half on 16 hr light, 8 hour dark. rosettes; 4) same plants as 3 but aerial tissue (stems, flowers and siliques. The vector is BRL's lambda Zip-Lox. The cDNA inserts were directionally cloned with Sal-Not arms using oligo dr

Sublibrary derived from a human retina cDNA library
Inserts from retina cDNA library DNA were isolated,
randomly primed, PCR amplified, size-selected, and cloned
into lambda gtl0. Individual plaques were arrayed and
used as templates for PCR amplification, and these PCR
products were used for sequencing."

1 (bases 1 to 265)

Hillier, L., Clark, N., Dubuque, T., Elliston, K., Hawkins, M., Holman, M., Hultman, M., Rucabb, T., Le, M., Lennon, G., Marra, M., Parsons, J., Rifkin, L., Rohlfing, T., Soares, M., Tan, F., Treyaskis, E., Waterston, R., Williamson, A., Wohldmann, P. and
strand cDNA was primed with a Pac I - oligo(dT) primer [5' AACTGGAAGAATAATAAAGATCTTTTTTTTTTTTTT 3'], double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Pac I and cloned into the Pac I and Eco RI sites of the modified pr773 vector. Library went through one round of normalization. Library constructed by Bento Soares and M.Fatima Bonaldo.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

ALIGNMENTS

```
for treating e.g. tumours, infection, auto:immune disease, graft rejection, cytotoxicity or inflammation claim 1; Fig 1; Spp; English.

The receptor binds to INF, and in particular, TNF-beta.

The receptor may be used for screening for antagonists and agonists of the receptor and for ligands for the receptor. Such agonists be used to inhibit the growth of tumours, to stimulate cellular
                                                05-MAY-1997 (first entry)

Human tumour necrosis factor receptor.

Tumour necrosis facor; TNF; receptor; TNF-beta; ligand; tumour; differentiation; immune response; autoimmune disease; inflammation; septic shock; graft-versus-host; apoptosis; ss.

Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                differentiation, to mediate the immune response and anti-viral response, to regulate growth and provide resistance to certain infections. The antagonists may be used therapeutically, to treat autoimmune diseases, inflammation, septic shock, to inhibit graft-versus-host reactions, and to prevent apoptosis.
